

Imaginary Product Page Project

Web Development Timeline

1. Gather Design Elements
 - Find Bootstrap templates that will work with my design
 - buttons, fonts, functionality, etc.
 - Find correct HEX codes for color schemes
 - Upload photos, icons, and graphics to GitHub
 - Save embed code for video
2. Build HTML head
3. Load content into the HTML
4. Load Bootstrap.css
5. Code design in personal CSS for H1, H2, H3, H4, body text, etc.
6. Start building out each section of the site from top down
 - Logo
 - Intro graphic + first CTA button
 - Opening copy + video
 - Check mark sections
 - Second CTA button with icon
 - Customer Testimonials
 - Footer w/ social share links
7. Have small meltdown of frustration at some point
8. Once happy with the look, commit changes and push to Github
9. Viola! A site!
